

FOR YOUR TOTAL UV SOLUTIONS!

**Polypropylene & Polyethylene
302 Series**

Formulated specifically for polyolefin materials, 302 series inks provide superior chemical resistance and adhesion to treated surfaces. When pretreated with corona or flame, Polypropylene and Polyethylene bottles exhibit excellent adhesion/abrasion resistance for handling and wear shortly after printing.

**ABS & Polycarbonate
304 Series**

Maximum abrasion resistance on ABS is achieved with the 304 series. Injection molded parts decorated with this formula surpass the abrasion resistance of two part epoxy inks with a clear overcoat, saving time and money. A clear overcoat version is also available, which in combination with the ink version creates the most durable solution yet.

**Glass, Metals, Nylon
306 Series**

This remarkable ink has nearly universal application on a variety of substrates, from glass and metals to filled nylons and acrylics. Chemical resistance is also high, making 306 series inks popular for stringent automotive application and electronics manufacturing.

**High gloss, Filled Nylons & Acrylics
307 Series**

High gloss is achieved with this new ink series, which exhibits many of the same performance qualities as 306, including a wide range of applications. 307 is the number one choice for the highest decorative gloss quality. This ink also achieves superior impact and abrasion resistance.

UV CURABLE INK KITS

Due to the high volume of samples requested we are no longer providing individual sample bottles. In order to meet customer's sample requirements, we have made UV ink kits. These kits come complete with either black & white for all pad inks or color kits for one specific substrate series. They sell for only \$200.00 each.
